

LegalEase: AI-Powered Legal Document Generator

Phase 2 – Requirement Analysis

Prepared by: M. Poornima

Class: II BCA

Institution: S.S.K.V College of Arts and Science for Women

Date: 24.09.2026

Prepared for: Dr. V. Priya

Phase Overview

This phase defines what the LegalEase system must do and the quality standards it should meet.

Functional Requirements

- Create/select a document project.
- Select a supported document type.
- Collect required user information.
- Validate required fields.
- Generate a draft using templates and AI assistance.
- Display the generated document for review.
- Allow editing, saving, and export.
- Show meaningful validation and error messages.

Non-Functional Requirements

- Usable and beginner-friendly interface.
- Responsive normal editing and generation workflow.
- Secure handling of user-provided information.
- Readable and consistent document formatting.
- Maintainable modular implementation.
- Reliable save/export behavior.

Hardware and Software Requirements

- Computer/laptop or compatible device.
- Modern web browser.
- Frontend technologies such as HTML, CSS, JavaScript or a framework such as React.
- Backend such as Python/Flask, Django, Node.js/Express, or equivalent.
- Database such as SQLite, MySQL, PostgreSQL, or MongoDB if persistent storage is required.

- AI model/API access if AI generation is enabled.

Data Requirements

- Document type
- User-provided fields
- Template rules
- Generated draft
- Revision information
- Export metadata

Scope and Limitation

The prototype is intended for educational and drafting assistance. It must not claim that AI-generated text is guaranteed to be legally correct or suitable for a particular jurisdiction.

Academic Project Note: LegalEase is an educational drafting prototype. AI-generated legal text should be treated as a draft and reviewed by a qualified legal professional before real-world legal use.
