

LegalEase: AI-Powered Legal Document Generator

Phase 3 – Project Design

Prepared by: M. Poornima

Class: II BCA

Institution: S.S.K.V College of Arts and Science for Women

Date: 24.09.2026

Prepared for: Dr. V. Priya

Phase Overview

The design converts requirements into a modular architecture, data structure, interface, and user workflow.

System Architecture

- User Interface → Application Logic → Input Validation → Template/Prompt Layer → AI Generation → Document Formatting → Preview/Export → Optional Database.

Main Modules

- User Interface Module
- Document Selection Module
- Input and Validation Module
- Template Management Module
- AI Generation Module
- Preview and Editing Module
- Export Module
- History/Storage Module

Data Design

A project may contain a document type, user inputs, generated content, document version, timestamps, and export settings. A simple relationship is User → Projects → Documents → Sections/Fields.

User Interface Design

- Dashboard with document categories
- Step-by-step information form
- Generation screen with progress/status
- Editable document preview
- Save, download, and export controls

Workflow

Start → Select document type → Enter details → Validate → Generate draft → Review/edit → Preview → Save/export.

Security and Usability

- Minimize sensitive information in the academic prototype.
- Use authentication and access controls if accounts are implemented.
- Provide privacy notices.
- Use clear labels and error messages.
- Make the review step prominent before export.

Academic Project Note: LegalEase is an educational drafting prototype. AI-generated legal text should be treated as a draft and reviewed by a qualified legal professional before real-world legal use.
